*I'm a 33-year-old down to earth guy from the northern parts of Sweden, but I have been living in Stockholm for a decade now. I have almost **5 years professional experience** mainly in the **Front-End** area with expertise in the **Angular** echo system. I also have an interest in the **design and UX** aspects of the process. I strive to challenge myself and to surpass expectations, and of course have fun while doing it. I'm currently looking forward to face new challenges as an **independent freelancer**. I speak fluent **Swedish and English**.*

TECH PROFILE

- **Front-End:** Solid knowledge in modern JavaScript and its latest features. Expertise in the **Angular** framework (TypeScript, RXJS, NGRX, Jasmine, Karma). Great skills in the Bootstrap UI-library. I also have experience working with the React and React Native libraries, some professional but also from spare time projects. I'm currently playing around with the Vue framework in order to gain a solid foundation in all of the main front end frameworks and libraries.
- **Back-End:** Basic skills in node.js, PHP and Java.
- **DevOps:** Experience working with Jenkins, OpenShift, Linux and GitHub.
- **Version control:** Mainly GIT but I also have some experience with mercurial. I strive to follow the semantic versioning and conventional commit guidelines.
- **Agile practices:** Scrum and Kanban.

PROFESSIONAL EXPERIENCE

SEB, Front-End developer, 2 years (current employment)

SEB is one of the major banking corporations in Sweden. I currently work in the team "Identification and Signing" which develops and maintains a variety of microservices consisting of user interfaces and APIs to handle all authentication and signing needs at the bank. My main contribution includes a highly configurable login application (<https://id.seb.se>) used by all the banks different channels and which caters up to almost 1000 login attempts every minute. I also built the Front-End of an internal administration interface for the login application, different signing surfaces for payments and documents, a demo application (built with React) for our iFrame-able applications that visualizes supported query parameters as well as the event driven communication between the parent site and the iFrame. Most applications included integration towards different rest APIs and handling of asynchronous events, as well as design and UX work. Since the bank fills a critical role in society there is high demand on secure and stable code, achieved through rigorous testing, code reviewing and efficient build pipelines.

NABO, Front-End developer, 2.5 years

NABO offers a variety of services to around 2000 housing cooperatives in Sweden. They have developed the only web platform on the market that is custom built for managing housing cooperatives.

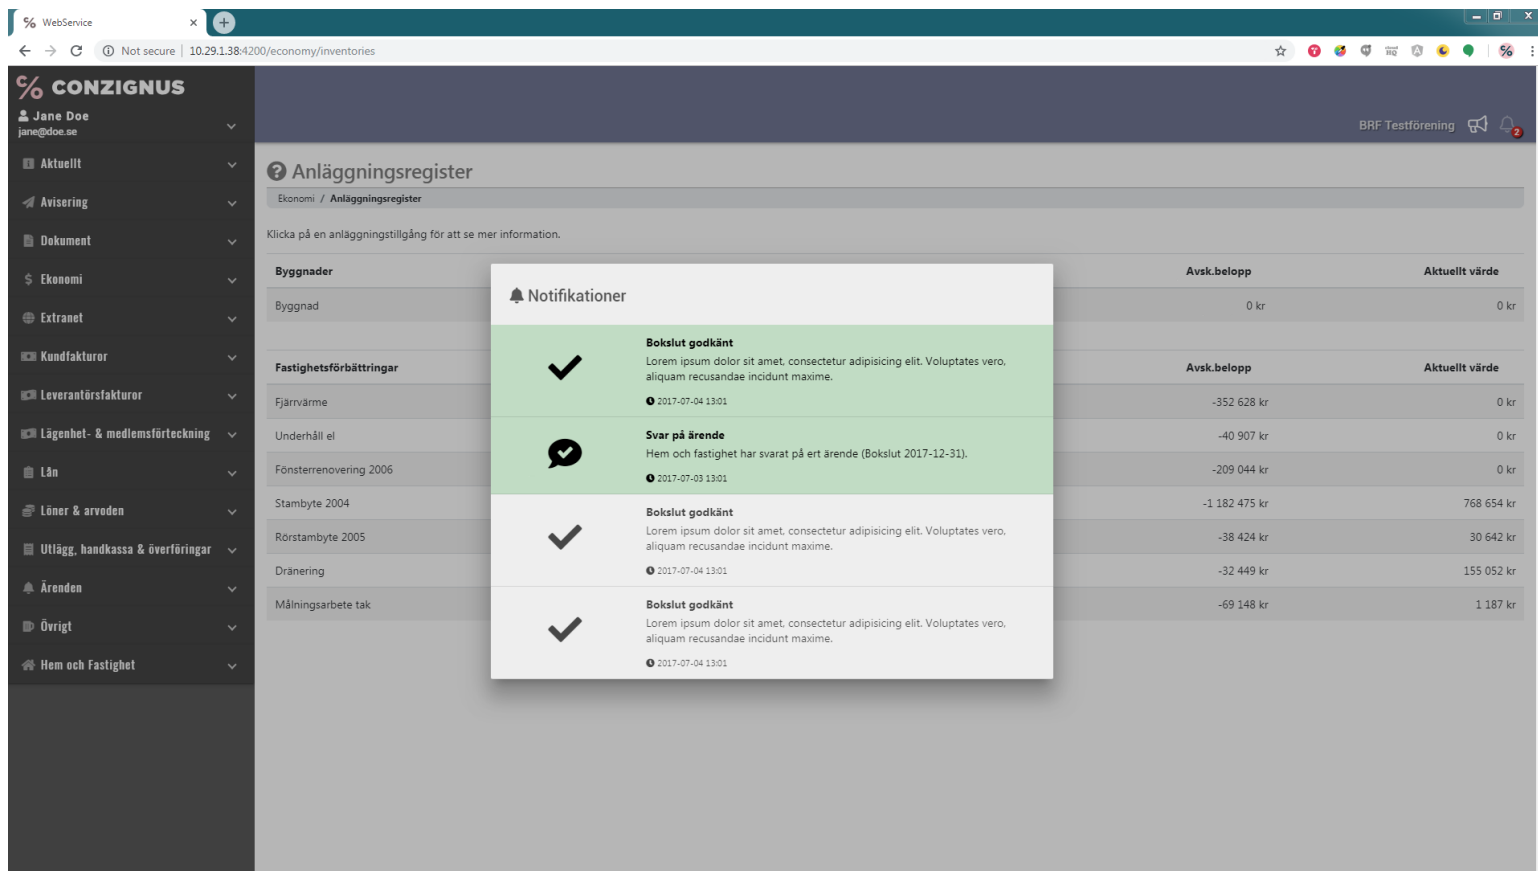

The platform includes an admin system in which around 200 employees work in on a daily basis, and a web portal with over 8000 regular users consisting of tenants, board members and accountants to name a few. I was tasked to modernize the Front-End of both systems, moving from server side rendition using PHP with over 15 year old static layouts, to fully responsive modern Single Page Applications (with clear separation of logic and looks) powered by Angular. As the only Front-End developer in a small team that consisted of 5 developers including myself, I got to take full responsibility of the entire process, which included everything from the UX aspects with graphical design proposals and wireframes, to code implementation including integration towards REST APIs, and of course testing. As the company grew and the development team started to expand, my role also started to include mentoring newly employed talents.

HIGHER EDUCATION

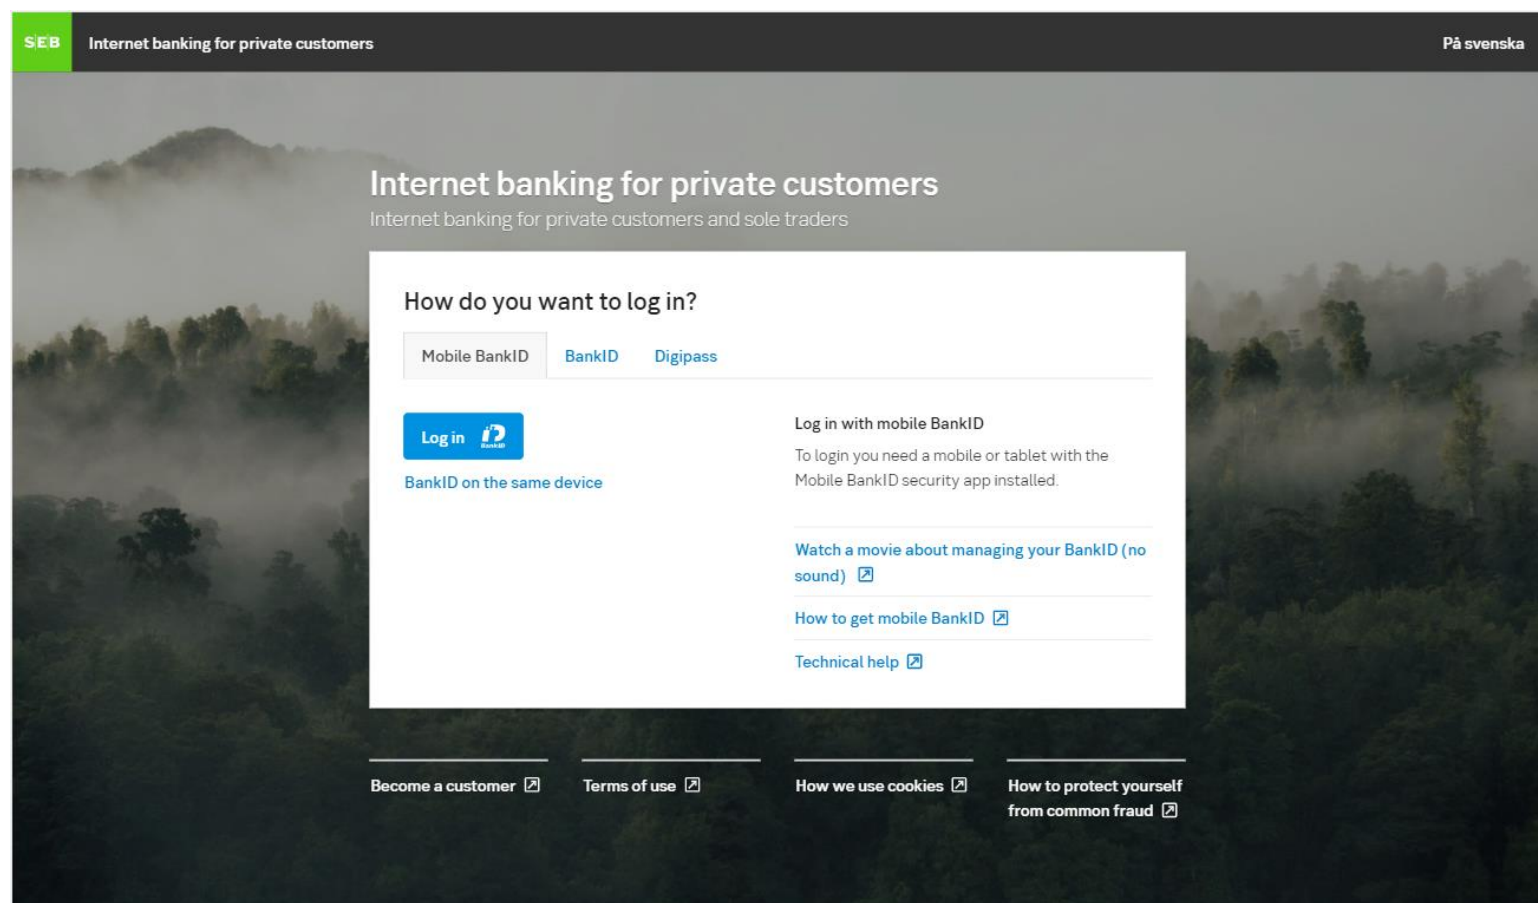

- **Media Technology**, Bachelor of Science, 3 years/180 credits, KTH Royal Institute of Technology. Includes a variety of courses within computer sciences and human-computer interaction.
- **Master programme in Interactive Media Technology**, 1.5 years/90 credits, KTH Royal Institute of Technology.
- **Sound Engineering**, 120 credits, Luleå University of Technology.

INTERESTS

I have been into music for as long as I can remember. Currently I play guitar in the rock band "Stungun Sons" (Feel free to check out our [Spotify](#)). I enjoy travelling and discovering new places, training at the gym, playing video games (I have a special fondness towards the retro consoles such as the Super Nintendo). I also enjoy photography and watching Netflix, and of course, hanging out with friends and family as much as I can.
